Liam (Stephen) Keane

(414) 882-3276 | s.liam.keane@gmail.com | linkedin.com/in/liamkeane | github.com/liamkeane

Education

Carleton College Northfield, MN
Bachelor of Arts in Computer Science, GPA: 3.8/4.0 *June 2025*

Work Experience

Genesis10 Remote
Data Analyst Consultant (Client: UPMC) *Oct. 2025 – Present*

- Reverse-engineered legacy Informatica ETL workflows across 100+ tables spanning Oracle and SQL Server, and authored corresponding source-to-target mapping documentation and business logic specifications for a Data Vault 2.0 architecture, translating requirements into SQL transformations for implementation by data engineers
- Delivered recurring demos of migration progress to stakeholder calls of 100+ attendees, including senior business leadership, framing technical deliverables in terms of business performance and cost impact
- Wrote and maintained QA test suites validating data integrity, transformation logic, and business rule accuracy, identifying and resolving defects before they could impact production insurance member records

Data Engineering Fellow *June 2025 – Oct. 2025*

- Selected for Genesis10's highly competitive paid data professional training program with an acceptance rate below 5%
- Completed intensive training in SQL, Python, ETL development, and cloud-based data engineering workflows

Johnson Controls Inc. Milwaukee, WI
Sales Enablement Team Intern *June 2024 – June 2025*

- Interviewed sales reps to find where proposal research slowed them down, then prototyped and demoed an AI chatbot for performance contracting queries and proposal drafting, iterating on user feedback to improve accuracy
- Gathered requirements from sales enablement, then built a Power Apps and Python tool to replace a manual email/spreadsheet scheduling process, demoing weekly and adjusting based on team feedback
- Built Power BI and Python dashboards for executive leadership, revising content and design based on their input

Carleton College Northfield, MN
Computer Science TA *Sep. 2022 – June 2024*

- Tutored 15+ students weekly on programming concepts, debugging techniques, and course material
- Provided feedback on 60+ weekly assignments to improve student comprehension and performance

Projects

Peer-to-Peer File Sharing Client | *Rust* Apr. 2025 – Jun. 2025

- Engineered a decentralized peer-to-peer file-sharing client with a dual listener/requester architecture using asynchronous I/O to handle concurrent multi-peer file requests without blocking
- Designed a local catalog system that hashes and validates file metadata to authorize transfers between trusted peers, with cross-platform state persistence and a suite of automated unit tests run via Cargo

Custom SSH Client | *C* Sep. 2024 – Nov. 2024

- Built an SSH client from scratch, implementing the protocol version exchange, key exchange negotiation, Diffie-Hellman key derivation and server authentication, and encrypted, MAC-verified channel communication (AES-128-CTR / HMAC-SHA1) to authenticate and execute remote commands on a live OpenSSH server

Technical Skills

Languages: SQL, Python, C, Rust, Java
Cloud & Data Platforms: Azure, Snowflake, Informatica
Dev Tools & Libraries: Microsoft Copilot, Linux, Git, Docker, NumPy, pandas, Matplotlib
Certifications: SAFe 6 Agilist, SnowPro Core, SnowPro Associate: Platform, Azure Data Fundamentals

Interests

Puzzles of all kinds, literature, live music, metalsmithing, nordic skiing
